

SVKM'S NMIMS
Mukesh Patel School of Technology Management and Engineering

Assignment No: One	
Class: B.Tech	Semester:
Subject: Elements of Project Management	
Date of issue:	Date of Submission :

	Description of Question	BL*
Q1	Write different definitions of project	1
Q2	Write different definitions of project management	1
Q3	List the conditions which need to be satisfied to consider task/activities as a project	3
Q4	Explain benefits of studying project management for engineers OR “Engineers irrespective of their specialization must acquire knowledge/skills of project management” Explain	4
Q5	Describe classification of projects	1
Q6	Describe classification of project management in different environment	1
Q7	List and explain different Project management approaches	3
Q8	‘Scope’ and ‘Feasibility’ are two important and significant concepts in project management. Explain the statement in detail	4
Q9	Elaborate on systems approach in project management with suitable example	1
Q10	List and explain the phases of project life cycle	3
Q11	Sketch and explain the common stretched S-project life cycle	3
Q11	Sketch and explain System Development Cycle	3
Q12	Describe Triple constraints of project management	2
Q13	“In project management Cost is function of Performance, Time and Scope” Explain with suitable example	4
Q14	Explain need of efficient and effective project management	4
Q15	Explain benefits of project management	3
Q16	List and explain five criteria Cleland and King have suggested for determining when to use project management	4

Q17	List the processes of SDLC (System Development Life Cycle) applied to IT (Information Technology) projects and briefly explain each process*	3
Q18	Explain following development process models associated with IT projects*: 1. Waterfall model 2. Incremental model 3. Iterative model	3
Q19	Explain six constraint model in project management ** (<i>Cost, Risk, Benefits, Quality, Scope and Time</i>)	3
Q20	Explain ' quality ' in project management particularly focusing on IT (information technology) related projects	4
Q21	Apply the concept of the Project Life Cycle to the development of an engineering project (such as a solar power plant, bridge construction, or software application). Explain the activities performed, key deliverables, and major stakeholders involved in each phase of the project life cycle.	3
Q22	Analyze the significance of each phase of the Project Life Cycle in the successful execution of an engineering project. Illustrate your answer by considering a suitable engineering project and discuss the consequences of poor planning or execution in any one phase on the overall project performance	4
Q23	Analyze the importance of a project feasibility study before initiating an engineering project. Examine how technical, economic, operational, legal, environmental, and schedule feasibility collectively influence the decision to approve or reject a proposed project. Support your answer with a suitable engineering example	4

Unit	Description	Duration
1.	Introduction to Project Management Definition, classification of project management in different environments, scope, systems approach, project feasibility, project life cycle, systems development cycle phases.	08 Hrs
