

Assignment 1 — HTML Tags & Attributes

Assignment 1 — HTML Tags & Attributes

Based on: IMAP Lecture 1 (HTML Tags & Attributes Lab Manual)

What you are given

You have been provided two starter files:

- `starter.html` — a basic portfolio webpage with a standard layout (header, nav, about section, skills list, projects table, contact form, footer)
- `starter.css` — the stylesheet for the page

Open `starter.html` in your browser before you begin, so you know what the page looks like at the start.

What you need to do

There are **10 tasks** below. Each task asks you to modify only `starter.html` — you do not need to touch `starter.css` for this assignment. Work through them **in order**, on the same file — each task builds on the page as it exists after the previous task.

For **every task**, you must submit:

1. A **"Before"** screenshot — the relevant part of the page as it looked before your change.
2. An **"After"** screenshot — the same part of the page after your change.
3. The **block of HTML code you added or changed** for that task, pasted in as code (e.g., the `<th>Status</th>` and `<td>` lines you added to the table).

You do not need to screenshot the entire page every time — just the section that changed is fine, as long as the change is clearly visible.

Submission format

Submit a single **PDF** named `<Roll No.>_IMAP_Lab1.pdf` (e.g., `J012_IMAP_Lab1.pdf`) containing, for each of the 10 tasks:

```
### Q<number> – <short title>
Before: [screenshot]
After:  [screenshot]
Code added/changed:
[paste the HTML block you added or changed]
```

Along with your final `starter.html` file (with all 10 changes applied), `starter.css` can stay unchanged.

Tasks

Q1. Personalize the header

Change the `<title>`, the `<h1>`, and the `<p class="subtitle">` in the header to your own name and a real one-line introduction about yourself.

Q2. Add a new list item

In the **Skills** section, add **two more** `<li>` items to the existing `<ul>` list — two more skills you actually have (technical or non-technical).

Q3. Add a new column to the table

In the **Projects** table, add a new column called **Status**, with header `<th>Status</th>` and a `<td>` value for each existing row (e.g., `Completed`, `In Progress`).

Q4. Add a new row to the table

Add a **third project row** to the same table, filling in all columns — Project Name, Description, and the Status column you added in Q3.

Q5. Add an image

Insert an `<img>` tag somewhere inside the **About** section (a profile photo, a project screenshot, or any placeholder image). It must have a proper `alt` attribute describing the image, and a `width` attribute.

Q6. Wrap the image in a figure with a caption

Take the `<img>` you added in Q5 and wrap it inside a `<figure>` element, adding a `<figcaption>` underneath it describing the image.

Q7. Add a new form field

In the **Contact** form, add one new field with a matching `<label>` — for example a `<select>` dropdown for "Subject" (with at least 2 `<option>`s) or an `<input type="checkbox">` for "Subscribe to updates".

Q8. Add an external link

In the footer, add a link to a real profile of yours (GitHub, LinkedIn, or similar) that:

- opens in a new tab (`target="_blank"`)
- includes `rel="noopener noreferrer"`
- includes a `title` attribute that shows a tooltip on hover

Q9. Add a semantic tag and a description list

Add an `<aside>` element somewhere on the page containing a short "Fun fact about me" note. Inside it (or elsewhere on the page), add a `<dl>` description list that defines **two terms** relevant to you (e.g., two technologies you know), using `<dt>` for each term and `<dd>` for its description.

Q10. Add a blockquote and emphasis

In the **About Me** section, add a `<blockquote>` containing a quote that inspires you (or your personal motto). Also update the About Me paragraph to wrap one important word or phrase in `<strong>` and another in `<em>`.
